Databricks Data Engineer Professional

Results-driven Senior Data Engineer with extensive experience in marketing analytics, data platform modernization, and stakeholder engagement. Led 10+ member teams to deliver executive dashboards and business-critical insights across global marketing functions. Built automated monitoring and validation frameworks ensure 99.5% data reliability and reduced reporting delays. Known for translating complex data into actionable insights, driving \$1M+ pipeline impact, and partnering closely with business teams to enable confident, data-backed decisions.

Experience

Assistant Manager | LatentView Analytics Pvt Ltd, Chennai
Digital Experience Marketing

JUL 2019 – TILL

SANDBOX DUSTER (ENTERPRISE CLOUD GOVERNANCE & COST STRATEGY)

- **Architected and led the end-to-end development of "Sandbox Duster,"** a full-stack Flask and Databricks-integrated application engineered to automate storage management across complex sandbox environments.
- **Established enterprise-wide governance standards** by designing a "One-Click" lifecycle management protocol, effectively standardizing data retention policies for distributed engineering teams.
- **Developed an Executive Admin Suite** providing high-level visibility into storage telemetry, enabling data-driven decisions that significantly reduced cloud storage overhead and optimized infrastructure spend.
- **Engineered a robust audit and recovery framework**, utilizing persistent logging to ensure transparency in table renames and deletions, maintaining 100% compliance with internal data handling policies.

DATA ENGINEERING AUTOMATION & PIPELINE ORCHESTRATION

- **Spearheaded a strategic automation initiative**, replacing manual data auditing and monitoring processes with a high-performance Python-based framework, resulting in a measurable increase in team operational velocity.
- **Engineered an automated "Production vs. Archive" classification engine**, streamlining security reporting and allowing stakeholders to focus on high-risk assets through prioritized, multi-sheet analytical reports.
- **Designed advanced monitoring systems** using Spark SQL and System Tables to track real-time lineage, storage growth trends, and pipeline health, drastically reducing the Mean Time to Detection (MTTD) for failures.

TECHNICAL LEADERSHIP & SECURITY COMPLIANCE

- **Advocated for and implemented PAT-based secure authentication protocols** for all internal API integrations, reinforcing the organization's security posture during large-scale data migrations.
- **Architected a scalable security auditing solution** leveraging the GitHub Enterprise API to proactively identify and mitigate credential exposure across hundreds of repositories.
- **Collaborated with cross-functional leads** to translating complex business requirements into scalable technical specifications, bridging the gap between raw data and actionable business intelligence.

Microsoft's Business Planning

- Actively contributing to OKR Grinds: Generating impactful insights and recommendations using Data Analytics, Text Analytics, Social Media Analysis.
- Works Recognized with client appreciations: Prong1, YouTube Comment Analysis, Brave Browser Exploratory Analysis (Competitor), Edge Bar Analysis that leads to have business decisions on our Product Feature releases.
- Handling Power BI dashboards and creating business insights with complete ownership, having direct client interactions to work on their requests.
- Built automated Azure pipeline using **Azure Data Factory + Databricks + Azure Gen 2 Storage / Cosmos** to fetch, cleanse, and transform marketing data before publishing to Power BI.
 - Implemented scheduled orchestration and dependency management for reliable dashboard refresh cycles.
 - Reduced reporting latency from **8 hours to 10 minutes**.
 - Enabled consistent KPI availability for executive stakeholders.

Product Development

- As a part of the Data Extraction and Ingestion team, I developed python scripts to extract the various social media data and process it in a consumable manner.
- Extraction and Validation of the data are the main source of the product to get the insights and deliver the data on time which helped us to pitch more clients.
- Created various models such as Spam/Ham Classification, Sentiment Classification, NER model.
- Automated the process to improve efficiency and to reduce the manual intervention in production.

Education

APRIL 2018

BE - CSE / Velammal Institute of Technology, Chennai

Secured an overall aggregate of 8.53 CGPA - First rank with distinction.

Skills

- *Analytics Tools* – Synthesio, Sprinklr, Adobe Analytics, Titan
- *Visualization Tool* – Power BI
- *Web App Development* – Flask, HTML, CSS, JavaScript
- *Desktop App Development* – Tkinter
- *Cloud* – Amazon Web Services / Azure
- *Programming* – Python, PySpark, SQL
- *Database* – MySQL, SQLite, SQL Server
- *Machine Learning* – Regression, Prediction / Forecasting, Classification model
- *ETL* – SSIS, Tidal Automation, SnapLogic, Azure Data Factory, Databricks

Achievements

Certifications

- Microsoft Certified Azure Developer Associate
- Databricks Certified Data Engineer Associate
- Databricks Certified Data Engineer Professional
- Databricks Certified Gen AI Data Engineer Associate

Awards

- Spotlight Award in September 2019 within the Products Team.
- Encore Award for the quarter April - June 2020, October – December 2022.
- Spirit of LatentView – **Business Impact** for the quarter July – September 2021.
- Received **Performance Excellence Award (Cash Reward)** for leading CRM Migration and modernizing enterprise ETL architecture.
